

AMENDMENTS TO THE CLAIMS

1. (currently amended) A ~~floor-treatment~~floor-cleaning machine operable along a working direction comprising:with
an undercarriage-(1),
at least one positionally-fixed floor-cleaning unit, and
at least one positionally adjustable floor-treatmentfloor-cleaning unit (11), which is
attached to the undercarriage (1) in such a way that it can pivot said at least one positionally
adjustable floor-cleaning unit pivots around a substantially vertical axis (20, 29) in order to vary
the working width a working width of said at least one positionally adjustable floor-cleaning
unit, characterized in that the
wherein the at least one positionally adjustable floor-treatmentfloor-cleaning unit (11)
can be pivoted in two directions (B, C) from its position corresponding to the maximum-a
maximum working width in order to reduce the working width, and
wherein the at least one positionally adjustable floor-cleaning unit is attached to the
undercarriage in a manner that allows to vary its inclination relative to a horizontal plane.
2. (currently amended) A ~~floor-treatment~~floor-cleaning machine according to claim 1,
~~characterized in that~~wherein the at least one positionally adjustable floor-treatmentfloor-
cleaning unit (11) is attached to the undercarriage (1) in such a way that it can be displaced
linearly (D) in addition to its pivoting capability (B, C) in two directions.
3. (currently amended) A ~~floor-treatment~~floor-cleaning machine according to claim 2,
~~characterized in that~~wherein the linear displacement (D) of the at least one positionally
adjustable floor-treatmentfloor-cleaning unit (11) takes place perpendicular to the working
direction-(A).
4. (currently amended) A ~~floor-treatment~~floor-cleaning machine according to one of claims
2 or 3, ~~characterized in that~~further comprising a working drive unit is provided for linear

displacement (~~D~~) of the at least one positionally adjustable ~~floor-treatment~~floor-cleaning unit (~~11~~).

5. (currently amended) A ~~floor-treatment~~floor-cleaning machine according to claim 4, characterized in that ~~there is provided, in the front part thereof, further comprising a touch contact provided in a front part of said machine which acts on the~~a controller of the drive unit for the at least one positionally adjustable ~~floor-treatment~~ unit.

6. (currently amended) A ~~floor-treatment~~floor-cleaning machine according to claim 1, characterized in that ~~wherein~~ the at least one positionally adjustable ~~floor-treatment~~floor-cleaning unit (~~11~~) is attached to the ~~a~~ front rim of the undercarriage (~~1~~) relative to the main working direction (~~A~~).

7. (currently amended) A ~~floor-treatment~~floor-cleaning machine according to claim 1, characterized in that ~~wherein~~ the at least one positionally adjustable ~~floor-treatment~~floor-cleaning unit (~~11~~) is held in its position ~~corresponding to and biased toward~~ the maximum working width by means of a spring device that applies an initial force.

8. (currently amended) A ~~floor-treatment~~floor-cleaning machine according to claim 1, characterized in that ~~wherein~~ the at least one positionally adjustable ~~floor-treatment~~floor-cleaning unit (~~11~~) is attached to the undercarriage (~~1~~) in such a way that it can pivot around a horizontal axis (~~14~~) in order to vary its inclination.

9. (canceled)

10. (currently amended) A ~~floor-treatment~~floor-cleaning machine according to ~~claim 9~~claim 1, characterized in that ~~wherein~~ at least one positionally adjustable ~~floor-treatment~~floor-cleaning unit further comprises a revolving endless sweeping belt (~~15~~).

11. (currently amended) A ~~floor-treatment~~floor-cleaning machine according to claim 10, characterized in that ~~the~~wherein a direction of revolution (E) of the revolving endless sweeping belt (15) is reversible.

12. (currently amended) A ~~floor-treatment~~floor-cleaning machine according to claim 11, characterized in that wherein the direction of revolution (E) of the ~~endless sweeping belt (15)~~ reverses automatically upon reversal of the working direction.

13. (currently amended) A ~~floor-treatment~~floor-cleaning machine according to ~~claim 9~~claim 1, characterized in that wherein the positionally adjustable ~~floor-treatment~~floor-cleaning unit comprises a rotary brush (24), ~~which is driven in rotation (F) and whose~~having a bristle array (27) is disposed in the form of a helical coil.
